Essential Therapeutics

# Aromatic Medicine & Viral Infections

by Ron Guba

## Overview:

In the realm of herbal medicine, essential oils are certainly the most potent anti-infectious extracts at our disposal. These anti-infectious properties include effectiveness against viruses as well.

These organisms are not 'alive' in the usual sense (like bacteria), but cause their damage by hijacking the genetic machinery of cells they infect to make numerous new copies of themselves, killing cells in the process and sometimes overstimulating our immune response. Various essential oils have been demonstrated to 'kill' viruses at low concentrations, by protecting cells from invasion, damaging the protein coat viruses use to enter cells and enhancing immunity.

In this seminar we will consider the research available on the anti-viral properties of essential oils and case histories using essential oil treatments.

We will discover the essential oils most suited for anti-viral treatments and discuss possible effective treatments for viral conditions such as Herpes simplex infections and the emerging H1N1 influenza virus.

**FOR WHOM** : Anyone interested in using essential oils effectively and or creatively

**FEE** : **\$88.00** (inclusive GST)

**TRAINING CENTRE** : AUSTRALASIAN ACADEMY OF WELLNESS THERAPIES

**DATE / TIME** : **Sunday 15th November 2009 - 9.00am to 12.30pm**

Book before 30 October 2009 to enjoy **15%** early bird discount.
